

1)

Hello ForeFlight,

I could use some help filing my flight plan. Where do I enter extra remarks (like a special request), and how do I do that? Thanks.

Joe Towerflower

Hi Joe! Thank you for reaching out to Foreflight's support team.

To add additional remarks to a flight plan in Foreflight, navigate to Flights, and select the flight you want to add remarks to. Once the flight details are filled out, click on "Proceed to File". If you scroll down on this page, there will be a section called "Remarks/Other Information". You will be able to add any additional remarks for your flight to the section labeled "Additional Remarks".

Thank you for reaching out, please let us know if you have any other questions in the future.

Thank you,

ForeFlight Support

2)

Hello ForeFlight,

I run a small flight department that operates three Dassault Falcon 2000s. We mainly fly in the US and Canada, with a few trips per year across the pond to Europe. One of my pilots said we should consider you for our operation. Why should we pick you over your competition? What value might your products add to my flight department? Please be specific.

Regards,

J. Jetsetter

Hi and thank you for considering ForeFlight! I'd love to highlight some of our features that would make us a great choice for your department.

ForeFlight Dispatch is the core of our Business Aviation suite. It connects your department's scheduling, flight planning, and trip support functions through seamless integration, enabling efficient flight planning for any operation. Our user-friendly interface promotes easy communication and collaboration between flight planners and pilots using ForeFlight Mobile.

Some of these specific features that makes ForeFlight shine are Flight Tracking, Trip Support, Charts & Data, and Runway Analysis.

ForeFlight Tracking integrates live flight status and progress information in Dispatch, both in a map-based view and within the Flights tab. This combination of flight planning and monitoring in one place empowers you to anticipate and respond to adverse factors such as weather, so you can proactively mitigate scheduled impacts before they happen.

ForeFlight Trip Support bolsters your team with comprehensive trip planning, fueling, and ground handling services to maximize operational efficiency and ensure passenger satisfaction.

Since you have an international operation, **Jeppesen's global charts**, terrain, obstacles, and NavData will be available for your avionics and ForeFlight Mobile.

Our **Dynamic Runway Analysis and Weight and Balance** streamlines the flight planning process, allowing your pilots to make reliable and safe decisions in the air. This comes with comprehensive alerts that pop up automatically when on the ground and in the air.

ForeFlight has many Falcon 2000 precise **performance profiles** directly from the manufacturer built in to make flight planning even easier.

Many corporate fleet operators already flying Falcon aircraft trust ForeFlight for its industry-leading capability and ease of use. I'd love to set up a demo to show you these features live, let me know your availability if this interests you.

Have a great day and happy flying!

ForeFlight
